Fully ADA Compliant

What makes our kiosk smart?.....Consolidated Payments & Reports!

Self-Service Convenience Center Edition

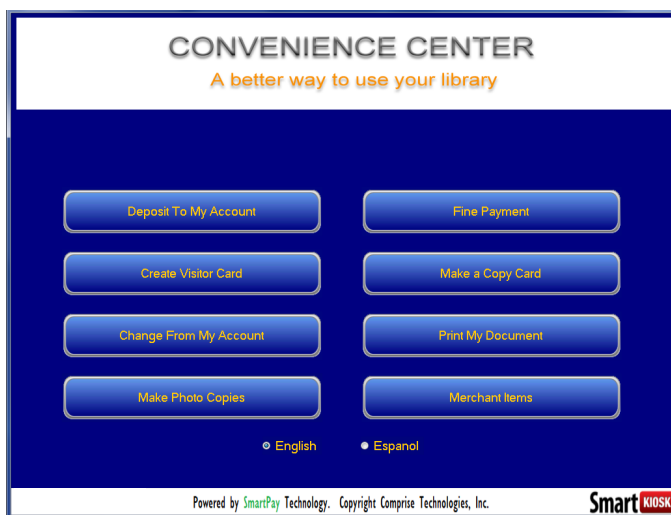

You can configure your Convenience Centers to offer your patrons the greatest ease to conduct their business with the options of the following features:

- ◆ Fine & Fee Payment

- ◆ Connect a MFD to combine:

- ◆ Print Release for Public PCs & Wi-Fi
- ◆ Copy Payment

- ◆ Purchase Visitor Pass for PC Access

- ◆ Merchandise Payment

- ◆ Book Sales
- ◆ Pens, Pencils
- ◆ Ear Buds, USB Sticks etc.

- ◆ Library Card as Payment Aggregator— Add Value to Library Card Account

- ◆ Supports Payments with: Cash, Credit/Debit, & Library Card Account for each payment object

Payment Collection Point Advantage

Unlike industry typical coin and bill towers, Convenience Centers have the intelligence to provide you the information you want to know. Real time reporting of all transactions, payment methods, and cash on hand increases the efficiency of your cashing and maintenance cycles while lowering the risk of pilferage and waste.

PCI Advantage

Like all payment products from Comprise, Convenience Centers are designed to let you validate PCI compliance at the lowest possible level; SAQ C. Convenience Centers integrate fully with Smart Terminals so you can offer patrons payment card service without adding an untenable burden to your compliance efforts.

Real-Time Reporting

The Smart Kiosk offers real-time transaction reports. No matter how many kiosks you have, you'll know revenue by payment type (cash, credit, account), revenue by location, and much more. Know when it is time to collect by reviewing how much cash is in each unit. These reports and inquiries are online so you can view them from anywhere.

Specifications

The Smart Kiosk requires an IP address (static or DHCP) and communicates via TCP/IP with your ILS server. The facility must provide a 10mbs-compatible RJ45 network connections) and standard 20amp, 120v grounded outlet within 8 feet of the device. The Smart Kiosk is equipped with its own internal surge protector and requires 2 network connections.

The Smart Terminal needs to be on an isolated network to keep the credit card data separated and balance of network out of scope for PCI DSS.

Dimensions:

- ◆ Height: 52"
- ◆ Width: 24" (includes shelf)
- ◆ Depth: 18"
- ◆ Weight: Approximately 70 lbs.
